5	SIMS Hospital, Vadapalani

THE EXPERTS IN ONCOLOGY HEALTHCARE SINCE FIVE DECADES

One in ten people in the world will get cancer in their life time. Every six deaths in the world is due to cancer. Yet, cancer is one of the earliest problems faced by mankind today. But the saving grace is that when detected early most cancers are curable. When there is a diagnosis, there is always a shining star that guides you to safe shores.

Prof. Subramanian, the Senior Most Medical Oncologist in the Country has been that shining star who has stood rock solid for the last 40 decades guiding the lives of patients suffering from cancer, safety and beyond. His positivity, clarity of thought and singular focus has helped him lead out patients through their toughest times. He firmly believes that he and his incredible team at VS Hospitals have been instrumental in achieving comprehensive care and ability to foster an environment for continuous learning and collaboration.

VS Hospitals which started as a fledgling in 1968 has today grown to its full potential and is now one of the best hospitals in the world. The consistent good feedback & further surgeon and medical director, who has been one of the most sought after names in the country for comprehensive cancer care.

The Medical Oncology team of VS Hospitals headed by the legendary Prof. Subramanian delivers contemporary clinical care practiced in the Indian institutions in the western world. Apart from conventional chemotherapy, VS is one of the first to introduce advanced treatment protocols like Immunotherapy in India. Immunotherapy has revolutionized cancer care by stimulating the body's immune system to recognize and attack cancer cells thereby providing hope of cure to advanced stage IV diseases.

Advances in genetics and molecular diagnostics have enabled the use of precision medicine in oncology. Molecular profiling of tumors helps identify specific genetic mutations and alterations, leading to personalized treatment strategies and targeted therapies.

VS Hospitals has also introduced non-invasive diagnostic for cancer detection like Liquid Biopsy. Liquid biopsy involves the non-invasive analysis of circulating tumor DNA (ctDNA), circulating tumor cells (CTCs), or other bio-markers found in blood samples. This new paradigm provides valuable information about tumor genetics, treatment response, and the development of drug resistance, aiding in early detection, monitoring, and guiding treatment decisions.

The surgical oncology team is headed by the renowned Prof. Anandh Chandy Iyer. He and his brilliant team of skilled and specialized surgeons offer the entire spectrum of oncologic surgery at VS. Advanced techniques like IHRG are performed on a routine basis. The IHRG approach involves minimally-invasive laparoscopic, robotic or percutaneous evidence-based practices, such as preoperative education, pain management strategies, early mobilization, and optimized nutrition leading to reduced complications, shortened hospital stays, and faster recovery following cancer surgery.

VS Hospitals is also one of the first private hospitals in the city to commence Radiotherapy. Blessed with a world-class team of clinicians, medical physicists and technologists, over the last two decades the department has made much progress, delivering advanced treatment techniques like IMRT, IGRT, SBRT. Rapid fire to name a few it has been continuous evolution in the quest for excellence. Plenty of research papers have been published by the team in the effective use of chemotherapeutic agents in tandem with radiotherapy for optimal results. Adaptive Radiotherapy is actively used in the center. Adaptive radiotherapy involves modifying the treatment plan based on changes in tumor size, shape, and position during the course of treatment. By utilizing advanced imaging and treatment planning techniques, adaptive radiotherapy ensures that the radiation is accurately delivered to the changing tumor, improving treatment outcomes dramatically.

Overall, VS Hospitals has changed the landscape of cancer care in this part of the country and beyond, ensuring patients lead a happy, healthy life. Wishing the team well to continue their mission service to mankind.
